Short Description:

Today, many families with young children must make a choice between spending significant portion of their income on child care, finding a cheaper, but potentially lower- quality care option, or leaving the workforce altogether to become a full-time caregiver.

Whether due to high cost, limited availability, or inconvenient program hours, childcare challenges redriving parents out of the work. Infect, in2016 alone, an estimated 2 million parents made career sacrifices due to problems with child care.

Child care challenges have become a barrier to work, especially for mothers, who disproportionately take on unpaid caregiving responsibilities when their family cannot find or afford childcare. In Bangladesh, most parents have limited knowledge on child care and rearing Ourprojectobjectistosolvethchildcaresystemforworkingparents.The name of our application project is "CLOUD CARE". so, our software will help you to take care of your baby with an educated moderator. Management Software provides a host of features that include mobile app, a parent portal, child schedules, staffs. schedules, medical records, billing, and payments, among others. the target group fusers of our solution are the educated jobless people, working parents, and the main concern is our children to keep them safe.

Problem Domain

Child care challenges have become a barrier to working, especially for mothers, who disproportionately take on unpaid caregiving responsibilities when their family cannot find or afford childcare. so, our web site will help you to take care of your baby with an educated moderator. So specifically, this created for childcare attendance tracking, accounting, and tuition payments.

Management provides a host of features that include, an employee portal, a parent portal, child, student details and an admin portal.

Key features of CLOUD CARE Manager include a robust accounting and receivable management,

a fully integrated ACH & credit card processing with Rapid Tuition, and an Employee Center that seamlessly track employee hours, certifications, and training.

Management Software provides a host of features that include mobile app, a parent portal, child schedules, staffs.

schedules, medical records, billing, and payments, among others.

the target group fusers of our solution are the educated jobless people, working parents, and the main concern is our children to keep them safe.

Functional Requirements

User Registration

There only parents will register their information. After entering into the website or in the app there will be an interface where some option will be available. Login, register, child consulting hour, moderator performance, communication, invoicing and payment, learning and assessment.

After clicking on register, a new interface will appear and it will ask user's name, mobile number, email address.

After entering the details, a username and password will be sent to user's email.

Login

The system will allow users to login into the system with their given username and password. After a successful login the homepage will appear.

Users must change initially assigned login password after the first successful login.

If the user inserts wrong password, he will be given a warning and after three unsuccessful attempts the account will be locked and a new password will be sent to user's email and mobile number and by this code the user can login to the system.

If the user forgets password, he can request for a new password by clicking forget password option. After that, the system will ask his/her mobile number or email to verify whether the number or email belongs to an account or not. If matches then a new password will be sent to user's mobile number or email as per his/her choice otherwise system will show an invalid message.
